1. Purpose of R-NRUF

The purpose of the General Numbering Resource Utilization Forecast (G–NRUF) is to provide an annual forecast to aid in projecting Numbering Plan Area (NPA) and North American Numbering Plan (NANP) exhaust. The G–NRUF requires current and prospective Code Holders to submit actual and forecasted annual data regarding their current and prospective future use of Central Office (CO) Codes to the Canadian Numbering Administrator (CNA) on an annual basis.

In accordance with the Canadian Numbering Resource Utilization Forecast (C-NRUF) Guideline (the Guideline), approved by the Canadian Radio-television and Telecommunications Commission (CRTC) in Telecom Decision CRTC 2010-152 dated 12 March 2010:

When an NPA is entering the timeframe for NPA Relief Planning (e.g., within or about 72 months before the Projected Exhaust Date), an initial R-NRUF is conducted to obtain actual and forecast annual data at the Exchange Area level of detail. The purpose of the initial R-NRUF is to validate the Projected Exhaust Date for an exhausting NPA, and to provide the CNA with detailed information to be used to identify a potential Relief Date and to prepare the Initial Planning Document as outlined in the Canadian NPA Relief Planning Guidelines.

Based on the January 2010 G-NRUF results, the CNA determined that NPAs 250/604/778, 289/905, 416/647 and 819 were within the 6-year window for NPA relief planning. On 15 December 2010 the CNA requested R-NRUFs from the current and prospective Canadian Central Office Code (NXX) Holders in those NPAs.

2. High Level Summary

The results from the January 2011 R-NRUF are different from the July 2010 R-NRUF results due to various Telecommunications Service Providers (TSPs) submitting a set of data to the CNA that is different from the July 2011 R-NRUF data. The CNA has verified the input from various TSPs and the variance from previous input can be rationalized.

Specific changes are listed below:

- NPA 250/604/778 Projected Exhaust Date is now forecast for November 2014, which moves the Projected Exhaust Date in by one (1) year and nine (9) months from the July 2010 R-NRUF result of August 2016.
- NPA 289/905 Projected Exhaust Date is now forecast for April 2015, which moves the Projected Exhaust Date out by one (1) month from the July 2010 R-NRUF result of March 2015.
- NPA 416/647 Projected Exhaust Date is now forecast for May 2015, which moves the Projected Exhaust Date in by five (5) months from the July 2010 R-NRUF result of October 2015.
- NPA 819 Projected Exhaust Date is now forecast for September 2012, which moves the Projected Exhaust Date in by one (1) year and one (1) month from the July 2010 R-NRUF result of October 2013.

819	G - NRUF January 2010	1 April 2010	March 2014
819	R - NRUF July 2010 (adjusted per Telecom Notice of Consultation CRTC 2010-94 directive to set aside 7 CO Codes for initial code assignments for Carriers already providing service, and 10 for initial code assignments for new entrants)	13 September 2010	October 3013
819	R - NRUF January 2011 (adjusted per Telecom Notice of Consultation CRTC 2010-94 directive to set aside 7 CO Codes for initial code assignments for Carriers already providing service, and 10 for initial code assignments for new entrants)	5 April 2011	September 2012

3. Schedule of Future R- NRUF Activities in this Year

Due Date	NRUF Type	NRUF Format	NPAs
8 August 2011	R-NRUF	Format 2 – proposed by CNA	250/604/778, 289/905, 416/647, 902

4. R–NRUF Assumptions

The assumptions used for the January 2011 R-NRUF for NPAs 250/604/778, 289/905, 416/647 and 819 are the assumptions that were provided on 26 October 2010 to the CNA by the Canadian Steering Committee on Numbering (CSCN) for conducting the 2011 G-NRUF.

5. Summary of Challenges Encountered During the R-NRUF Process

Some TSPs continue to remain unaware of the significance and schedule for completing NRUFs. The CNA started contacting companies on January 24, 2011 to remind them of the February 1, 2011 due date.

6. Conclusion

In accordance with Section 4 of the Canadian Numbering Resource Utilization Forecast (C–NRUF) Guideline, the CNA has conducted an assessment, at a total aggregate level, to determine whether the January 2011 R-NRUF results are reasonable and the Projected Exhaust Dates for NPAs 250/604/778, 289/905, 416/647 and 819 are realistic.

As identified in previous reports, there continues to be some potential for volatility in demand for numbering resources as a result of the expansion of both wireless and CLEC services. Due to these uncertainties, there is some latitude for determining what is reasonable and realistic. Based on this assessment, in the CNA's opinion, the January 2011 R-NRUF results for NPAs 250/604/778, 289/905, 416/647 and 819 appear reasonable and the Projected Exhaust Dates for the NPAs are generally realistic based on the information provided by those TSPs that submitted data.
