Table 4a, 4b, and 4c – CO Code (NXX) protection

These tables provide details for existing protection, and additional protection that would be required by Plans 1a and 1b if 7-digit dialling is retained for all local calls. Note that if 10-digit dialling is applied to all local calls in and from Alberta, CO Code protection could be removed in Alberta (apart from the CO Code corresponding to Montana's NPA in the Coutts area reachable by 7-digit dialling from Sweetgrass MT, therefore not subject to Canadian regulation).

The exchanges in the second column are shown either in italic or regular characters. Regular indicates exchanges with local 7-digit dialling across an existing NPA boundary. Italics indicate exchanges which do not have local calling across an existing NPA boundary, but have local calling with an exchange which has local 7-digit dialling across an existing NPA boundary.
